15/04/2024	193
16/04/2024	176
17/04/2024	199
18/04/2024	247

The official SESC sunspot number is computed according to the Wolf Sunspot Number formula
 $R = k(10g + s)$,
where **g** = the number of sunspot groups (regions),
s = the total number of individual spots in all the groups
k = a scaling factor that corrects for seeing conditions

Sunspots are temporary phenomena on the photosphere of the Sun that appear visibly as dark spots compared to surrounding regions. They are caused by intense magnetic activity, which inhibits convection by an effect comparable to the eddy current brake, forming areas of reduced surface temperature.
